PARK CENTER WD 2019 Drinking Water Quality Report For Calendar Year 2018

Public Water System ID: CO0122600

Esta es información importante. Si no la pueden leer, necesitan que alguien se la traduzca.

We are pleased to present to you this year's water quality report. Our constant goal is to provide you with a safe and dependable supply of drinking water. Please contact JAMES WADE at 719-275-2055 with any questions or for public participation opportunities that may affect water quality.

General Information

All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (1-800-426-4791) or by visiting http://water.epa.gov/drink/contaminants.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV-AIDS or other immune system disorders, some elderly, and infants can be particularly at risk of infections. These people should seek advice about drinking water from their health care providers. For more information about contaminants and potential health effects, or to receive a copy of the U.S. Environmental Protection Agency (EPA) and the U.S. Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and microbiological contaminants call the EPA Safe Drinking Water Hotline at (1-800-426-4791).

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include:

- •Microbial contaminants: viruses and bacteria that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- •Inorganic contaminants: salts and metals, which can be naturallyoccurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- •Pesticides and herbicides: may come from a variety of sources, such as agriculture, urban storm water runoff, and residential uses.
- •Radioactive contaminants: can be naturally occurring or be the result of oil and gas production and mining activities.
- •Organic chemical contaminants: including synthetic and volatile organic chemicals, which are byproducts of industrial processes and petroleum production, and also may come from gas stations, urban storm water runoff, and septic systems.

In order to ensure that tap water is safe to drink, the Colorado Department of Public Health and Environment prescribes regulations limiting the amount of certain contaminants in water provided by public water systems. The Food and Drug Administration regulations establish limits for contaminants in bottled water that must provide the same protection for public health.

Lead in Drinking Water

If present, elevated levels of lead can cause serious health problems (especially for pregnant women and young children). It is possible that lead levels at your home may be higher than other homes in the community as a result of materials used in your home's plumbing. If you are concerned about lead in your water, you may wish to have your water tested. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. Additional information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline (1-800-426-4791) or at http://www.epa.gov/safewater/lead.

Source Water Assessment and Protection (SWAP)

The Colorado Department of Public Health and Environment may have provided us with a Source Water Assessment Report for our water supply. For general information or to obtain a copy of the report please visit www.colorado.gov/cdphe/ccr. The report is located under "Guidance: Source Water Assessment Reports". Search the table using 122600, PARK CENTER WD, or by contacting JAMES WADE at 719-275-2055. The Source Water Assessment Report provides a screening-level evaluation of potential contamination that *could* occur. It *does not* mean that the contamination has or will occur. We can use this information to evaluate the need to improve our current water treatment capabilities and prepare for future contamination threats. This can help us ensure that quality finished water is delivered to your homes. In addition, the source water assessment results provide a starting point for developing a source water protection plan. Potential sources of contamination in our source water area are listed on the next page.

Please contact us to learn more about what you can do to help protect your drinking water sources, any questions about the Drinking Water Quality Report, to learn more about our system, or to attend scheduled public meetings. We want you, our valued customers, to be informed about the services we provide and the quality water we deliver to you every day.

Our Water Sources

Sources (Water Type - Source Type)	Potential Source(s) of Contamination
FOUR MILE CREEK NEW 1994 95 (Surface Water-Intake) WELL NO 2 REDRILL (Groundwater-Well)	EPA Chemical Inventory/Storage Sites, EPA Toxic Release Inventory Sites, Permitted Wastewater Discharge Sites, Aboveground, Underground and Leaking Storage Tank Sites, Solid Waste Sites, Existing/Abandoned Mine Sites, Other Facilities, Commercial/Industrial/Transportation, Low Intensity Residential, Urban Recreational Grasses, Quarries / Strip Mines / Gravel Pits, Pasture / Hay, Deciduous Forest, Evergreen Forest, Septic Systems, Oil / Gas Wells, Road Miles

Terms and Abbreviations

- Maximum Contaminant Level (MCL) The highest level of a contaminant allowed in drinking water.
- Treatment Technique (TT) A required process intended to reduce the level of a contaminant in drinking water.
- **Health-Based** A violation of either a MCL or TT.
- **Non-Health-Based** A violation that is not a MCL or TT.
- Action Level (AL) The concentration of a contaminant which, if exceeded, triggers treatment and other regulatory requirements.
- Maximum Residual Disinfectant Level (MRDL) The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
- Maximum Contaminant Level Goal (MCLG) The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
- Maximum Residual Disinfectant Level Goal (MRDLG) The level of a drinking water disinfectant, below which there
 is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial
 contaminants.
- Violation (No Abbreviation) Failure to meet a Colorado Primary Drinking Water Regulation.
- **Formal Enforcement Action (No Abbreviation)** Escalated action taken by the State (due to the risk to public health, or number or severity of violations) to bring a non-compliant water system back into compliance.
- Variance and Exemptions (V/E) Department permission not to meet a MCL or treatment technique under certain conditions.
- Gross Alpha (No Abbreviation) Gross alpha particle activity compliance value. It includes radium-226, but excludes radon 222, and uranium.
- **Picocuries per liter (pCi/L)** Measure of the radioactivity in water.
- **Nephelometric Turbidity Unit (NTU)** Measure of the clarity or cloudiness of water. Turbidity in excess of 5 NTU is just noticeable to the typical person.
- Compliance Value (No Abbreviation) Single or calculated value used to determine if regulatory contaminant level (e.g. MCL) is met. Examples of calculated values are the 90th Percentile, Running Annual Average (RAA) and Locational Running Annual Average (LRAA).
- Average (x-bar) Typical value.
- Range (R) Lowest value to the highest value.
- Sample Size (n) Number or count of values (i.e. number of water samples collected).
- Parts per million = Milligrams per liter (ppm = mg/L) One part per million corresponds to one minute in two years or a single penny in \$10,000.
- Parts per billion = Micrograms per liter (ppb = ug/L) One part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.
- Not Applicable (N/A) Does not apply or not available.
- Level 1 Assessment A study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.
- Level 2 Assessment A very detailed study of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

Detected Contaminants

PARK CENTER WD routinely monitors for contaminants in your drinking water according to Federal and State laws. The following table(s) show all detections found in the period of January 1 to December 31, 2018 unless otherwise noted. The State of Colorado requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants are not expected to vary significantly from year to year, or the system is not considered vulnerable to this type of contamination. Therefore, some of our data, though representative, may be more than one year old. Violations and Formal Enforcement Actions, if any, are reported in the next section of this report.

Note: Only detected contaminants sampled within the last 5 years appear in this report. If no tables appear in this section then no contaminants were detected in the last round of monitoring.

Disinfectants Sampled in the Distribution System

TT Requirement: At least 95% of samples per period (month or quarter) must be at least 0.2 ppm <u>OR</u>

If sample size is less than 40 no more than 1 sample is below 0.2 ppm

Typical Sources: Water additive used to control microbes

Disinfectant Name	Time Period	Results	Number of Samples Below Level	Sample Size	TT Violation	MRDL
Chlorine	December, 2018	Lowest period percentage of samples meeting TT requirement: 100%	0	4	No	4.0 ppm

		Lead a	nd Copper	Sampled in	the Distribu	ıtion Systen	1	
Contaminant Name	Time Period	90 th Percentile	Sample Size	Unit of Measure	90 th Percentile AL	Sample Sites Above AL	90 th Percentile AL Exceedance	Typical Sources
Copper	11/13/2018 to 11/13/2018	0.02	40	ppm	1.3	0	No	Corrosion of household plumbing systems; Erosion of natural deposits
Lead	05/22/2018 to 05/24/2018	1.1	40	ppb	15	0	No	Corrosion of household plumbing systems; Erosion of natural deposits
Copper	05/22/2018 to 05/24/2018	0.01	40	ppm	1.3	0	No	Corrosion of household plumbing systems; Erosion of natural deposits
Lead	11/13/2018 to 11/13/2018	0.7	40	ppb	15	0	No	Corrosion of household plumbing systems; Erosion of natural deposits

	Disinfection Byproducts Sampled in the Distribution System											
Name	Year	Average	Range Low – High	Sample Size	Unit of Measure	MCL	MCLG	MCL Violation	Typical Sources			
Total Haloacetic Acids (HAA5)	2018	12.46	6.7 to 21.3	8	ppb	60	N/A	No	Byproduct of drinking water disinfection			
Total Trihalome thanes (TTHM)	2018	54.23	32.8 to 80	8	ppb	80	N/A	Yes	Byproduct of drinking water disinfection			

Total Organic Carbon (Disinfection Byproducts Precursor) Removal Ratio of Raw and Finished Water										
Year	Average	Range	Sample	Unit of	TT Minimum	TT Violation	Typical Sources			
2018	1.65	0.88 to 2.46	12	Ratio	1.00	No	Naturally present			
							in the environment			
	Year	Year Average	Year Average Range Low – High	Year Average Range Sample Low – High Size	Year Average Range Sample Unit of Low – High Size Measure	Year Average Range Sample Unit of TT Minimum Ratio	Year Average Range Low – High Sample Size Unit of Measure TT Minimum Ratio TT Violation			

Disinfectants Sampled at the Entry Point to the Distribution System (Chlorine/Chloramine Row is Optional, Chlorine Dioxide Row is Required)										
Disinfectant Name Year Number of Sample TT/MRDL Ty Samples Above or Below Level Size Requirement Violation										
Chlorine/Chloramine	2018	0	1197	TT = No more than 4 hours with a sample below 0.2 MG/L	No	Water additive used to control microbes				

	Summary of Turbidity Sampled at the Entry Point to the Distribution System											
Contaminant Name	Sample Date	Level Found	TT Requirement	TT Violation	Typical Sources							
Turbidity	Date/Month: Aug	Highest single measurement: 0.33 NTU	Maximum 1 NTU for any single measurement	No	Soil Runoff							
Turbidity	Month: Dec	Lowest monthly percentage of samples meeting TT requirement for our technology: 100 %	In any month, at least 95% of samples must be less than 0.3 NTU	No	Soil Runoff							

	Radionuclides Sampled at the Entry Point to the Distribution System										
Contaminant Name	Year	Average	Range Low – High	Sample Size	Unit of Measure	MCL	MCLG	MCL Violation	Typical Sources		
Combined Radium	2016	0.23	0.2 to 0.3	3	pCi/L	5	0	No	Erosion of natural deposits		
Combined Uranium	2016	0	0 to 0	3	ppb	30	0	No	Erosion of natural deposits		

	Inorganic Contaminants Sampled at the Entry Point to the Distribution System											
Contaminant Name	Year	Average	Range Low – High	Sample Size	Unit of Measure	MCL	MCLG	MCL Violation	Typical Sources			
Barium	2018	0	0 to 0	1	ppm	2	2	No	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits			
Chromium	2018	3.3	3.3 to 3.3	1	ppb	100	100	No	Discharge from steel and pulp mills; erosion of natural deposits			
Fluoride	2018	0.49	0.49 to 0.49	1	ppm	4	4	No	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories			
Nitrate	2018	0.16	0.16 to 0.16	1	ppm	10	10	No	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits			
Selenium	2018	1.7	1.7 to 1.7	1	ppb	50	50	No	Discharge from petroleum and metal refineries; erosion of natural deposits; discharge from mines			

Cryptosporidium and Raw Source Water E. coli

Contaminant Name	Year	Number of Positives	Sample Size
E. Coli	2018	15	20

Secondary Contaminants**

**Secondary standards are <u>non-enforceable</u> guidelines for contaminants that may cause cosmetic effects (such as skin, or tooth discoloration) or aesthetic effects (such as taste, odor, or color) in drinking water.

Contaminant Name	Year	Average	Range Low – High	Sample Size	Unit of Measure	Secondary Standard
Sodium	2018	107	107 to 107	1	ppm	N/A
Total Dissolved Solids	2016	467.67	424 to 499	3	ppm	500
HARDNESS (AS CACO3)	2016	110.27	56.8 to 140	3	N/A	
MAGNESIUM	2015	51.5	12.8 to 90.2	2	N/A	

Violations, Significant Deficiencies, Backflow/Cross-Connection, and Formal Enforcement Actions

		Violations			
Name	Category	Time Period	Health Effects	Compliance Value	TT Level or MCL
TOTAL TRIHALOME THANES (TTHM)	FAILURE TO MEET REQUIRED LEVELS - HEALTH-BASED	04/01/2018 - 06/30/2018	Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous systems, and may have an increased risk of getting cancer.	83.43 UG/L	80 UG/L
TOTAL TRIHALOME THANES (TTHM)	FAILURE TO MEET REQUIRED LEVELS - HEALTH-BASED	01/01/2018 - 03/31/2018	Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous systems, and may have an increased risk of getting cancer.	82 UG/L	80 UG/L

Violations					
Name	Category	Time Period	Health Effects	Compliance Value	TT Level or MCL
A 7 7 1 A 7 7 A 4 7 A 4					

Additional Violation Information

Explanation of the violation(s), the steps taken to resolve them, and the anticipated resolved date:

While the water was always safe to drink, we take any violation very serious and would like to give our customers some information on what caused the issue, what we did to resolve it and what we are doing to prevent this from happening.

Warmer weather and reduced moisture in the fall and winter of 2017 caused higher than normal organic material in our surface water. The organic material and chlorine used for disinfection of the water caused the formation of higher levels of THM's. Our tests in November were higher than average for that time of year, causing our February tests to put us over the Maximum Contaminant Level (MCL), even though the tests in February were below the MCL. Our tests in May were also below the MCL, but the average remained above the MCL. Our tests in August put the average below the MCL.

To reduce the THM levels we adjusted how we blend our surface water, optimized the treatment plant, reduced the tank levels to minimize storage time, and flushed the lines more frequently. We also worked with a drinking water coach from the CDPHE to make sure we were conforming to state standards. We will continue to monitor water quality with the measures put into place to maintain low levels of THM's.

^{*}Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.*
